Background

The People's Place is a thrift store and food pantry located in Kingston NY, operating as non-for-profit organization.

Problem

Initially the NGO worked with the conventional system of keeping a record of all the giving's and donations via making physical entries into the ledger books, that was very cumbersome. Since there were many type of donations , it was not possible to link all of the donations to a particular person as all of the physical ledger books were separate and it was a manual process if some record was to be searched or donations for particular year had to be calculated. Moreover over the period of time it was virtually impossible to maintain the physical note books as they were subject to wear and tear due to excessive use.

Solution

We developed a web application that was able to track the inventory of the charity given to the NGO and along with the same how many individual's and families received food, shelter , turkey and other daily use items apart from this we track gifts on Christmas / thanksgiving and new years eve. The system kept records of all the donations done to NGO along with the donators details including how many families were fed by the donation recipient along with days and dates were also recorded in the system.
